RELEVANT EXPERIENCE

ClassFindr | *Full-Stack Software Engineer*

May 2026 - Aug. 2026

- Developed full-stack features for an AI-powered edtech platform helping students make informed decisions about course selection, college transfers, and academic planning, using Vue.js, Node.js, Prisma, and Azure.
- Worked within an agile Scrum team, participating in regular sprint planning, story reviews, and cross-functional meetings with product and engineering.
- Conducted direct user research by interviewing a high school student from the target audience, applying her feedback to shape feature design and improve usability.
- Influenced product and UX decisions in areas with limited formal requirements, drawing on user feedback and firsthand experience.

WolfPack DNA | *Web Developer Volunteer* | [wolfpackdna.com](#)

May 2026 - Aug. 2026

- Developed and deployed a modern React-based website for a nonprofit supporting investigative genetic genealogy and law enforcement, replacing an outdated platform with a scalable, maintainable solution.
 - Designed and implemented a secure administrative dashboard with authentication, enabling team members to manage cases, personnel, and media without developer assistance using Node.js, Google Cloud, and Firestore.
 - Collaborated closely with stakeholders to refine UI/UX, emphasizing accessibility, responsive design, SEO, and intuitive navigation for a broad range of users.
-

EDUCATION

The University of Texas at Dallas (UTD) | *Richardson, TX*

Expected May 2028

B.S. Computer Science

PROJECTS

Note to Self | [noteself.christiansheehan.com](#)

React, Node.js

- Built a browser-based digital audio workstation (DAW) from scratch, leveraging music and MIDI libraries including SoundFont Player and React MIDI hooks to support real-time MIDI device input and music composition.
- Designed a multiplayer music party game where players communicate secret prompts through original musical performances.
- Integrating an LLM-powered scoring system to evaluate player guesses and automate point distribution.

Speak with an Elephant | *HackSMU VII* | [elephant.christiansheehan.com](#)

React, Node.js, Claude API

- Developed an interactive web application that simulates communication with elephants by translating English into sequences of elephant vocalizations using the Claude API as a semantic translation layer.
 - Built a custom mapping of 211 elephant sounds with associated meanings to generate realistic elephant "responses" and conversations.
-

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, HTML/CSS

Technologies: React, Node.js, Express, Firestore, AWS

Developer Tools: Git, REST APIs, Claude API, Claude Code

Interests: Piano, Music Composition, Psychology, Philosophy
